Derwent Abstract: **(DE102004016764B) Novelty - A fail-safe circuit for gas valve, has at least one input (11) connected to a control device and at least one output (12,13) connected to a gas valve, in which the fail-safe circuit (10) prepares an output voltage at those outputs for opening a gas valve, when at the output (11) of the fail-safe circuit (10) an input is provided from the control device and has at least two different time-sequential frequency signals.**

Use - For microprocessor controlled gas valve, especially for piezo-driven gas valve.

Advantage - Provides a new type of fail-safe circuit for gas valves.

Images:

Description of Drawing(s) - A circuit diagram of the fail safe circuit for gas valves is given.

Circuit 10, Input 11, Outputs 12,13, Charge circuit 14, Voltage conversion circuit 15, Bipolar transistor (NPN transistor) 22, Transistor 24, Comparator 25, Coil 26, MOSFET 30 Dwg.1/1

First Claim:

[Show all 10 claims](#)

1. Fail-Safe-Schaltung für Gasventile, insbesondere für piezobetriebene Gasventile, mit mindestens einem an eine Regeleinrichtung anschließbaren Eingang (11) und mindestens einem an ein Gasventil anschließbaren Ausgang (12, 13), wobei die Fail-Safe-Schaltung (10) nur dann an dem oder jedem Ausgang (12, 13) eine zum Öffnen eines Gasventils erforderliche Ausgangsspannung bereitstellt, wenn an einem Eingang (11) der Fail-Safe-Schaltung (10) von der Regeleinrichtung ein mindestens zwei unterschiedliche, zeitlich aufeinanderfolgende Frequenzsignale aufweisendes Eingangssignal bereitgestellt wird.
